

New Catalogue with extended product range

The new product catalogue of wh Münzprüfer Berlin GmbH has been just released. New products especially for PC based applications have been developed and are included in this new catalogue version such as:

The electronic anti pin system ES 006 introduced in spring this year, which already attracted wide interest interested in the industry. An extra level of security and deterrent to vandalism can be achieved by preventing the acceptance of non metallic objects. Furthermore the coin entry can be closed for a certain time according to requests of operator. With the 3-colour LED, illuminating the coin slot, the unit serves as an eye catcher to attract customers and complements the design of the machine.

The coin feeder CIS 100 is the new coin handling solution offered by wh Münzprüfer Berlin GmbH for automatic payments solutions in retail business. The compact unit

separates and validates the inserted coins. All Euro denominations can be put into the coin feeder in any combination up to a mixed coin type capacity of 8 x 8 different coin denominations at once.

Using the ccTalk-USB Hub CCT 900 integrating up to 14 different payment systems and peripheral devices in any kiosk application became a fast and easy task. A class library and a Windows DLL is available for easy implementation of the component and is part of the standard delivery content.

Last but not least to mention the new version of the 3.5" coin selector series the EMP 800. The centrepiece of these units consist of a 40 MHz super fast, low voltage micro processor (3,3 Volt). Due to the faster processing speed a considerable higher efficiency of coin recognition rules can be achieved, thus enabling an even better coin separation. Programming of these units can be carried out now via any Windows mobile device using the new programming software whpocket 4. The EMP 800.14 v6 offers integrated USB interface for direct connection to a PC. The current consumption has been optimised to facilitate the power supply of the selector via the USB-Bus.

New CFO at IGT

International Game Technology has announced the promotion of Patrick W. Cavanaugh to the position of Executive Vice President and Chief Financial Officer. The promotion will be effective upon receipt of any required regulatory approvals. Cavanaugh was most recently IGT's Vice President of Corporate Finance and Investor Relations.

"Pat brings to the table a unique combination of extensive gaming industry experience as a financial executive, familiarity with Wall Street, and intimate knowledge of IGT," said TJ Matthews, IGT Chairman and CEO. "He has played an integral role in the financial management of the Company since the departure of the previous CFO in 2007, and I look forward to Pat's future contributions and leadership in his new role."

Cavanaugh, age 48, joined IGT in April 2004. Prior to joining the Company, he was Chief Financial Officer and Treasurer of Acres Gaming, Incorporated, a slot information systems company acquired by IGT in October 2003. Cavanaugh also previously served as Chief Financial Officer and Treasurer for Oasis Technologies, Inc. and Casino Data Systems, both of which were focused on supplying the gaming industry with innovative systems solutions.

Fun range from TAB

TAB Austria will be showing a range of exciting new products at this year's ATEI. The company already showed its Fun4Four game concept at IMA, which allows up to four players to enjoy a range of games simultaneously. In addition to this, TAB Austria will be showing its video AWP concept called Golden Island which can be configured to a number of different markets and comes packed with exciting games.

The Austrian gaming giant will also show its range of kiosks and terminals which are designed for all types of applications including Sports Betting, VLTs, FOBTs and more.

The Max Fire Jukebox from TAB now comes equipped with international charts, a top hits function and power search. The innovative Music to Go allows customers to download videos and music from the jukebox onto a mobile phone, memory stick or Bluetooth device.

Finally Silverball remains a trendsetter after 12 years in the industry and now comes with update 14. The touchscreen terminals contain more than 230 games in six categories, internet access and email function, national and international tournaments and the option of extension to the Jukebox Silverball MAX.

You can combine two or more Silverball STRATO to create a Silverball Island where all terminals can be played simultaneously. The compact Silverball COSMO, on the other hand, fits into the smallest of spaces and is therefore the ideal bar terminal.
