MP3 – Update-Disk

MP3 – Update-Disk

In order to make it easier to copy MP3-files to the Silverball MAX terminal, there is an MP3-Update-Disk which can be ordered under the number 831.000-022 at TAB Austria.

In your personal computer or in the MP3-Encoder Station should be installed a mobile rack in order to enable copying MP3 titles to the MP3-Update-Disk.

The PC mobile rack is also available at TAB Austria under the number 831.900-010 and should be installed by a computer specialist in your own personal computer as „secondary master“. (In the MP3-Encoder station the mobile rack is already integrated.)

The MP3-titles and the appropriate covers (files with ending .mp3 and .jpg) must be copied in the directory „\UPDATE“ of the MP3-Update-Disk. As soon as the process is finished you have to shut down the personal computer and remove the Update-Disk.

Insert the disk into the switched-off Silverball MAX and turn on the terminal. All titles will be copied onto the Silverball MAX terminal now.

After all titles have been copied, following message appears:

„MP3 UPDATE SUCCESSFULLY COMPLETED –
SWITCH OFF SILVERBALL, REMOVE UPDATE DISK AND SWITCH ON“
Switch off the Silverball MAX terminal and remove the MP3-Update-Disk now.

The titles have been copied onto the machine and can be switched on again.

In case the Silverball MAX terminal notifies that too less space remains for new titles, you have to delete an appropriate amount of titles and start the process of copying once again (in this case titles which are already found in the machine will no be copied twice).
